

BUILD A COMPLETE PRODUCTION-READY E-COMMERCE BUSINESS PLATFORM

I want you to build a complete, production-quality, full-stack e-commerce platform for a company that sells anime/movie-themed lifting straps, wristbands, belts, and other fitness accessories worldwide.

THIS IS NOT JUST A WEBSITE.

It must be both:

1. A world-class cinematic e-commerce storefront for customers
2. A complete business operating system/admin portal for the owner

The customer-facing website should feel like a combination of:

- AAA anime/game experience
- Cinematic movie website
- Premium fitness brand
- High-end streetwear brand
- Nike-level product campaign
- Luxury e-commerce
- Awwwards-level interactive website

The admin portal should feel completely different:

- Extremely simple
- Extremely fast
- Extremely organized
- Extremely easy to understand
- Mobile friendly
- Designed so a non-technical business owner can run the company without touching code

The ultimate goal is:

CUSTOMER:

"This is one of the coolest websites I've ever seen."

OWNER:

"I can run my entire company from here."

=====

1. IMPORTANT COPYRIGHT REQUIREMENT

=====

The company sells anime/movie-themed products.

Do NOT use copyrighted anime/movie characters, footage, logos, music, or artwork unless the company has the appropriate licenses.

The system must support licensed artwork when available.

For demo/placeholder visuals, use ORIGINAL anime-inspired artwork rather than copying existing copyrighted characters.

For example, use original:

- Anime-inspired athletes
- Martial artists
- Energy effects
- Training scenes
- Cinematic environments
- Original characters

The owner will provide the actual product designs in a PDF.

=====

2. PRODUCT DESIGN PDF

=====

The business owner has provided a PDF containing the designs for the company's belts/straps.

The PDF is an important source asset.

When the PDF is available in the project:

1. Inspect the PDF.
2. Identify every unique product/design.
3. Identify variants and colorways.
4. Extract product names where provided.
5. Extract relevant product information where available.
6. Organize the designs into a product catalog.
7. Create DRAFT product records from the designs.
8. Allow the admin to review and edit everything.
9. NEVER automatically publish products without admin approval.
10. NEVER invent product designs or specifications that aren't supported by the provided materials.

Create an admin feature:

ADMIN → PRODUCT DESIGN IMPORT

Workflow:

UPLOAD PDF

↓

ANALYZE PDF

↓

IDENTIFY DESIGNS

↓

CREATE DRAFT PRODUCTS

↓

ADMIN REVIEWS

↓

ADMIN EDITS

↓

PUBLISH

If the PDF cannot be reliably interpreted automatically, create a manual review interface rather than guessing.

=====

3. TECH STACK

=====

Use a modern production-ready stack.

Preferred:

- Next.js
- TypeScript
- Tailwind CSS
- PostgreSQL / Supabase
- Stripe
- ShipStation
- Resend
- GSAP
- GSAP ScrollTrigger
- Framer Motion where appropriate
- Google Analytics
- Canvas/WebGL only where it meaningfully improves the experience

Use clean component architecture.

Separate:

- UI
- Business logic
- Database
- External APIs
- Authentication
- Webhooks

External integrations must be isolated.

=====

4. CUSTOMER WEBSITE

=====

Create:

/

- /shop
- /products/[slug]
- /collections/[slug]
- /cart
- /checkout
- /track
- /account
- /account/orders
- /story
- /about
- /faq

The storefront must be fully responsive.

=====

5. MOBILE-FIRST

=====

The website must be designed MOBILE FIRST.

It must work exceptionally well on:

- iPhone
- Android
- iPad

- Tablets
- Laptop
- Desktop
- Large monitors

DO NOT simply shrink the desktop site.

Design separate mobile interaction patterns.

Mobile must support:

- Touch gestures
- Swipe product galleries
- Touch-friendly buttons
- Mobile navigation
- Mobile cart
- Mobile checkout
- Mobile tracking
- Mobile customer accounts
- Mobile admin

Heavy visual effects should automatically reduce on weaker devices.

=====

6. CINEMATIC INTRO

=====

The first visit should begin with an unforgettable cinematic animation.

Do NOT immediately show a normal e-commerce homepage.

Example:

Black screen.

Subtle particles.

An original anime-inspired athlete appears in a dark training environment.

The camera slowly moves forward.

The athlete approaches a barbell.

They put on the company's lifting straps.

They wrap the strap around the bar.

The strap tightens.

Camera rapidly moves toward the product.

The product fills the screen.

Energy/light effects expand outward.

The company logo appears.

The scene transitions seamlessly into the homepage.

The experience should feel like:

ANIME OPENING

+

AAA GAME INTRO

+

LUXURY PRODUCT COMMERCIAL

+

MOVIE TRAILER

Use:

- GSAP
- ScrollTrigger
- Canvas/WebGL where appropriate
- Image sequences
- Parallax
- Particles
- Masks
- Lighting
- Motion blur
- Camera-like movement

Do NOT create a massive video that destroys performance.

Include:

SKIP INTRO

Remember via local storage/cookie if the user has already seen it.

=====

7. HOMEPAGE

=====

After the intro, transition into the homepage.

Hero should contain:

POWERFUL HEADLINE

Example:

TRAIN LIKE THE HERO.

Supporting text:

Anime-inspired lifting gear built for people who refuse to train ordinary.

Buttons:

EXPLORE THE COLLECTION
OUR STORY

Hero should have:

- Cinematic artwork
- Product imagery
- Parallax
- Mouse interaction
- Particles
- Lighting
- Depth

=====

8. NAVIGATION

=====

Create a premium minimal navigation.

Desktop:

LOGO

SHOP
COLLECTIONS
STORY
ABOUT
CART

The navbar should transform while scrolling.

Cart count should animate.

When adding an item:

CART SHAKES
↓
COUNT POPS
↓
SUBTLE ENERGY EFFECT

Mobile:

LOGO
CART

Menu opens into:

SHOP
COLLECTIONS
STORY
ABOUT
TRACK ORDER
FAQ

=====

9. CUSTOM CURSOR

=====

Desktop only.

Create an elegant custom cursor.

Normal:
Small glowing dot.

Hover button:

Cursor expands.

Hover product:

Displays:

VIEW

Disable custom cursor on mobile.

Never interfere with usability.

=====

10. SCROLL EXPERIENCE

=====

Scrolling should feel like moving through a movie.

Use:

- Parallax
- Pinning
- Horizontal scrolling
- Scroll-triggered reveals
- Image masking
- Scale transitions
- Text transformations
- Product reveals
- Layered depth
- Cinematic zoom

Do NOT add random animations everywhere.

Every animation must have a purpose.

=====

11. COLLECTION EXPERIENCE

=====

Create a cinematic transition into the product collection.

Example:

Training scene transitions into product display.

Text:

CHOOSE YOUR POWER.

Then reveal collections.

=====

12. PRODUCT COLLECTION

=====

Do NOT use generic Shopify-style cards.

Each product card should feel premium.

Include:

- Product image
- Product name
- Price
- Collection
- Theme
- Stock status
- Quick Add

Hover:

- Product movement
- Lighting change
- Image movement
- CTA reveal
- Background reaction
- Subtle energy effect

=====

13. PRODUCT PAGE

=====

Product page should feel like a premium product reveal.

Include:

- Large gallery
- Product name
- Price

- Description
- Materials
- Benefits
- Size
- Color
- Variants
- Quantity
- Inventory
- Add to Cart
- Buy Now
- Reviews
- Shipping
- Returns
- FAQ

Create cinematic sections:

THE PRODUCT

BUILT FOR GRIP

DETAILS MATTER

THE COLLECTION

Show detailed product imagery:

- Stitching
- Material
- Padding
- Grip
- Durability
- Design

=====

14. PRODUCT VARIANTS

=====

Changing a variant should be animated.

When selecting a variant:

Previous image exits

New image enters

Lighting changes

Selected option animates

Price transitions

Quantity:

– 1 +

Animate quantity changes.

Prevent invalid quantities.

=====

15. ADD TO CART

=====

Create an impressive Add to Cart interaction.

When clicked:

PRODUCT IMAGE

SHRINK

TRAVEL TOWARD CART

CART REACTS

COUNT INCREASES

Then display:

ADDED TO CART

Do not block the customer.

=====

16. CART

=====

Desktop:
Animated sliding cart drawer.

Mobile:
Full-screen cart.

Display:

- Product
- Image
- Quantity
- Price
- Remove
- Subtotal
- Shipping
- Tax
- Total

Animate:

- Add
- Remove
- Quantity
- Price changes

=====

17. CHECKOUT

=====

Checkout must be extremely simple.

Do not sacrifice conversion for animation.

Flow:

INFORMATION

↓

SHIPPING

↓

PAYMENT

↓

COMPLETE

Support:

- Guest checkout
- Customer accounts
- Credit/debit cards
- Apple Pay
- Google Pay
- Stripe-supported payment methods

Never store raw card information.

=====

18. STRIPE

=====

Use Stripe for payment processing.

Implement secure Stripe webhooks.

Payment flow:

STRIPE
↓
PAYMENT SUCCESS
↓
VERIFY WEBHOOK
↓
CREATE ORDER
↓
DECREASE INVENTORY
↓
CREATE SHIPSTATION ORDER
↓
SEND RESEND EMAIL

Webhook processing MUST be idempotent.

If Stripe sends the same webhook twice:

ONLY ONE ORDER MUST BE CREATED.

=====

19. PAYMENT SUCCESS ANIMATION

=====

After successful payment:

Darken screen.

Energy/light expands.

Display:

MISSION COMPLETE

ORDER #10452

YOUR GEAR IS BEING PREPARED.

Button:

TRACK ORDER

Animation must never interfere with order creation.

=====
20. DATABASE
=====

Use a proper relational database.

Create tables for:

users

products

product_variants

product_images

collections

orders

order_items

shipments

inventory_transactions

discounts

reviews

customers

email_subscribers

email_campaigns

admin_users

admin_activity_logs

website_content

website_sections

=====
21. ORDER STATUS SYSTEM
=====

Create internal order statuses:

ORDER_PLACED
PAYMENT_CONFIRMED
PROCESSING
PACKAGED
LABEL_CREATED
SHIPPED
IN_TRANSIT
OUT_FOR_DELIVERY
DELIVERED
EXCEPTION
CANCELLED
REFUNDED
RETURNED

These statuses should power:

- Admin portal
- Customer tracking page

- Emails
- Analytics

=====

22. SHIPSTATION

=====

Integrate ShipStation.

After successful payment:

DATABASE ORDER

↓

SHIPSTATION ORDER

Automatically send:

- Customer
- Email
- Address
- Product
- SKU
- Quantity
- Weight
- Dimensions
- Order number
- Total

The employee should NOT manually re-enter orders.

Support:

- Shipping services
- Shipping rates
- Labels
- Tracking
- International shipping
- Returns
- Customs information
- Carrier services

=====

23. SHIPPING LABELS

=====

Admin order page:

ORDER #10452

PAID
READY TO SHIP

Carrier:
UPS

Service:
International

Tracking:
1ZXXXXXXXX

Buttons:

VIEW LABEL
PRINT LABEL
TRACK SHIPMENT

=====
24. TRACKING
=====

Create:

/track

Customer enters:

ORDER NUMBER
+
EMAIL

Show:

✓ ORDER PLACED
↓
✓ PAYMENT CONFIRMED
↓
✓ ORDER PACKAGED

Animate the current state.

Include:

- Carrier
- Tracking number
- Tracking link
- Estimated delivery when available

=====

25. SHIPSTATION TRACKING WEBHOOKS

=====

Use ShipStation webhook functionality where supported.

Flow:

Normalize carrier events into the internal order statuses.

Do NOT send an email for every tiny carrier scan.

Only send emails for meaningful milestones.

=====

26. AUTOMATIC EMAIL SYSTEM — RESEND

=====

Use RESEND as the email infrastructure.

There must be TWO separate email systems:

1. Transactional email
2. Marketing email

=====

27. TRANSACTIONAL EMAIL AUTOMATION

=====

Automatically send branded emails when meaningful order events happen.

EMAIL #1 — ORDER PLACED

Trigger:
Successful payment/order creation.

Subject example:

ORDER CONFIRMED — YOUR JOURNEY BEGINS

Include:

- Customer name
- Order number
- Products
- Quantity
- Total
- Shipping address
- Estimated shipping information
- Track Order button

EMAIL #2 — ORDER BEING PREPARED

Trigger:

Admin/fulfillment marks order as processing/preparing.

Subject:

YOUR GEAR IS BEING PREPARED

EMAIL #3 — ORDER PACKAGED

Trigger:

Admin marks order as packaged.

Subject:

YOUR GEAR IS PACKED

EMAIL #4 — SHIPPING LABEL CREATED

Trigger:

ShipStation creates shipping label.

Subject:

YOUR ORDER IS READY TO GO

Include:

- Carrier
- Tracking number
- Track Order button

EMAIL #5 — ORDER SHIPPED

Trigger:

Shipment becomes shipped.

Subject:

YOUR ORDER IS ON THE MOVE

Include tracking.

EMAIL #6 — ORDER IN TRANSIT

Trigger:

Meaningful carrier tracking milestone.

Subject:

YOUR GEAR IS ON THE WAY

EMAIL #7 — OUT FOR DELIVERY

Trigger:

Carrier reports out for delivery.

Subject:

TODAY'S THE DAY

EMAIL #8 — DELIVERED

Trigger:

Carrier reports delivered.

Subject:

YOUR PACKAGE HAS ARRIVED

EMAIL #9 — SHIPPING EXCEPTION

Trigger:

Carrier reports a meaningful exception.

Subject:

WE HIT A ROADBLOCK

Explain the issue and provide tracking.

EMAIL #10 — REFUND

Trigger:

Refund processed.

EMAIL #11 — CANCELLATION

Trigger:

Order cancelled.

All transactional emails should be beautifully branded.

Use:

- Logo
- Product images
- Order information
- Tracking button
- Consistent typography
- Brand visuals

=====

28. EMAIL AUTOMATION RULES

=====

Do NOT send duplicate emails.

Every email event must be idempotent.

Track which events have already triggered emails.

Example:

order #10452

SHIPPED_EMAIL_SENT = TRUE

Never send it again unless explicitly triggered by admin.

=====

29. MARKETING EMAIL SYSTEM

=====

Create:

ADMIN → EMAIL MARKETING

The owner should be able to manage marketing emails from the website.

Allow:

- Contacts
- Subscribers

- Audiences
- Segments
- Campaigns
- Drafts
- Scheduled campaigns
- Sent campaigns

Campaign examples:

NEW PRODUCT DROP
 NEW COLLECTION
 RESTOCK
 LIMITED EDITION
 DISCOUNT
 BLACK FRIDAY
 CYBER MONDAY
 SUMMER SALE
 NEWSLETTER
 BACK IN STOCK
 ABANDONED CART
 LOYALTY CAMPAIGN

=====

30. MARKETING EMAIL CREATOR

=====

Create a simple campaign builder.

Owner can:

- Enter subject
- Enter preview text
- Select audience
- Add headline
- Add text
- Add image
- Add product
- Add discount code
- Add button
- Schedule
- Send test
- Send campaign

Show email preview.

The owner should NOT need to code HTML.

=====

31. EMAIL AUDIENCES

=====

Allow segmentation such as:

ALL CUSTOMERS
NEW CUSTOMERS
REPEAT CUSTOMERS
HIGH-VALUE CUSTOMERS
CUSTOMERS WHO BOUGHT STRAPS
CUSTOMERS WHO BOUGHT WRISTBANDS
CUSTOMERS WHO HAVE NOT PURCHASED
EMAIL SUBSCRIBERS

Support customer consent/preferences.

Marketing emails must have unsubscribe functionality.

Do not treat transactional order emails as marketing consent.

=====

32. EMAIL ANALYTICS

=====

Admin email dashboard should show where supported:

- Sent
- Delivered
- Bounced
- Opens
- Clicks
- Unsubscribes
- Complaints

Campaign example:

SUMMER COLLECTION

Sent:
2,104

Delivered:
2,081

Open rate:
48%

Click rate:
12%

=====

33. ADMIN PORTAL

=====

Create:

/admin

This must be a completely secure administrator portal.

The admin portal is the BUSINESS OPERATING SYSTEM.

The owner must be able to manage almost everything from it.

=====

34. ADMIN DASHBOARD

=====

When owner logs in:

GOOD MORNING 🙌

TODAY'S SALES
\$1,284.92

ORDERS
31

TO SHIP
12

IN TRANSIT
47

DELIVERED

83

LOW STOCK

8

Also show:

ATTENTION REQUIRED

- Orders waiting to ship
- Low inventory
- Shipping exceptions
- Failed payments
- Out-of-stock products
- Important notifications

=====

35. ADMIN QUICK ACTIONS

=====

Create:

+ ADD PRODUCT
+ ADD INVENTORY
VIEW ORDERS
CREATE DISCOUNT
EMAIL MARKETING
MANAGE WEBSITE
VIEW CUSTOMERS

=====

36. ORDER MANAGEMENT

=====

Admin can:

- View orders
- Search orders
- Filter
- Sort
- Open orders
- View customer
- View payment

- View products
- View shipping
- View tracking
- Print labels
- Create labels
- Fulfill orders
- Refund
- Cancel
- Add internal notes

=====

37. BULK ORDER MANAGEMENT

=====

Allow selecting multiple orders.

Actions:

PRINT LABELS
EXPORT ORDERS
MARK FULFILLED
SEND EMAIL

=====

38. PRODUCT MANAGEMENT

=====

Admin can:

- Add
- Edit
- Archive
- Restore
- Change price
- Change description
- Change SKU
- Change images
- Change variants
- Change inventory
- Change collection
- Publish
- Unpublish

Statuses:

DRAFT
ACTIVE
OUT OF STOCK
ARCHIVED

Do not permanently delete products that belong to historical orders.

Use ARCHIVE.

=====

39. ADD PRODUCT WIZARD

=====

Make adding a product extremely easy.

STEP 1:
Basic information

STEP 2:
Design / Images

STEP 3:
Variants

STEP 4:
Pricing

STEP 5:
Inventory

STEP 6:
Shipping

STEP 7:
SEO

STEP 8:
Publish

Show live storefront preview.

=====

40. INVENTORY MANAGEMENT

=====

Dedicated inventory dashboard.

Example:

BLACK STRAPS	82
RED STRAPS	13 ▲ LOW
BLUE STRAPS	4 ▲ CRITICAL
WHITE STRAPS	0 OUT OF STOCK

Admin can:

ADD INVENTORY
REMOVE INVENTORY
CORRECT INVENTORY

Every change requires a reason.

Reasons:

RESTOCK
DAMAGED
LOST
MANUAL CORRECTION
RETURN
OTHER

=====

41. INVENTORY HISTORY

=====

Every inventory change records:

- Product
- Previous quantity
- New quantity
- Difference
- Reason
- Admin
- Timestamp

=====

42. AUTOMATIC INVENTORY

=====

When payment succeeds:

Decrease inventory automatically.

When an order is cancelled/refunded according to configured rules:

Restore inventory.

Prevent overselling.

Use proper database transactions/locking.

=====

43. LOW STOCK ALERTS

=====

Allow owner to set thresholds.

Example:

LOW STOCK THRESHOLD:
10

When inventory reaches threshold:

Show dashboard alert.

Optionally send owner an email notification.

=====

44. WEBSITE CONTENT MANAGEMENT

=====

Admin can edit the storefront without coding.

Manage:

Homepage
Collections
Story
About
FAQ

Shipping
Returns
Announcements

Homepage fields:

- Hero headline
- Hero subtitle
- Hero CTA
- Featured products
- Promotional banner

=====

45. HOMEPAGE SECTION MANAGER

=====

Allow drag-and-drop section ordering.

Example:

- ≡ HERO
- ≡ FEATURED COLLECTION
- ≡ STORY
- ≡ PRODUCT SHOWCASE
- ≡ REVIEWS
- ≡ FAQ
- ≡ NEWSLETTER

=====

46. CUSTOMER MANAGEMENT

=====

Admin can see:

- Name
- Email
- Orders
- Total spent
- Last order
- Account status

Customer profile shows complete order history.

=====

47. DISCOUNT MANAGEMENT

=====

Create discounts:

- Percentage
- Fixed amount
- Free shipping
- Product-specific
- Collection-specific
- Expiration
- Usage limit

Example:

WELCOME10
10% OFF
Expires September 30
Maximum uses: 500

=====

48. SHIPPING MANAGEMENT

=====

Admin shipping dashboard:

#1052
UPS
IN TRANSIT

#1051
CANADA POST
DELIVERED

#1050
DHL
OUT FOR DELIVERY

Allow:

VIEW TRACKING
VIEW LABEL
PRINT LABEL
VIEW SHIPMENT

=====

49. BUSINESS SETTINGS

=====

Owner can manage:

- Business name
- Logo
- Support email
- Phone
- Currency
- Default country
- Shipping
- Tax
- Returns
- Social links

=====

50. ADMIN USERS

=====

Support:

OWNER
Full access

MANAGER
Products
Inventory
Orders
Customers
Shipping

STAFF
Limited fulfillment capabilities

Use role-based access control.

=====

51. ADMIN ACTIVITY LOG

=====

Track every important admin action.

Example:

John changed inventory

Black Straps

82 → 182

Sarah created product

Dragon Collection Strap

John fulfilled order

#1052

Record:

- Admin
- Action
- Object
- Timestamp

=====

52. MOBILE ADMIN

=====

Admin portal MUST work extremely well on phones.

Owner should be able to:

- Check sales
- View orders
- Fulfill orders
- Add inventory
- Edit products
- Change prices
- Create discounts
- View tracking
- View customers
- Manage email campaigns

from an iPhone/Android phone.

=====

53. ADMIN DESIGN

=====

Unlike the customer site, the admin portal should NOT be overly cinematic.

It should be:

- Clean
- Fast
- Professional
- Minimal
- Easy to understand
- Efficient

Use animations only where they improve usability.

Examples:

- Toast notifications
- Drawer animations
- Modal transitions
- Count updates
- Confirmation animations

=====

54. ONE-CLICK BUSINESS MANAGEMENT

=====

Reduce unnecessary clicks.

For example:

ORDER #1052

[FULFILL]
[PRINT LABEL]
[TRACK]
[REFUND]

Do not force the owner through five different pages to accomplish a common action.

=====

55. ANALYTICS

=====

Integrate Google Analytics.

Track:

- Visitors
- Product views
- Add to cart
- Checkout
- Purchases
- Revenue
- Traffic source
- Country
- Device
- Product performance

Admin dashboard:

TOP PRODUCTS

1. Black Straps
2. Dragon Collection
3. Red Wristbands

Also provide sales/order analytics where practical.

=====

56. INTERNATIONAL SALES

=====

The company sells worldwide.

Do NOT hardcode the system to Canada.

Support:

- International addresses
- Multiple countries
- Multiple currencies
- International shipping
- Customs
- Duties/taxes
- Carrier differences
- Shipping services

Design the database and checkout to support global expansion.

57. SEO

Implement:

- Metadata
- Open Graph
- Product structured data
- Organization structured data
- Sitemap
- Robots.txt
- Canonical URLs
- SEO-friendly product URLs

Example:

/products/black-lifting-straps

58. PERFORMANCE

This website will have heavy visual effects.

Performance is critical.

Use:

- Lazy loading
- Code splitting
- Optimized images
- WebP
- AVIF
- Dynamic imports
- GPU-friendly animations
- Lazy-loaded animation libraries
- Reduced WebGL on mobile/weak hardware

Target excellent Core Web Vitals.

Respect:

prefers-reduced-motion

When enabled, reduce cinematic animation significantly.

=====

59. SOUND

=====

Do NOT autoplay sound.

Architect for optional sound effects later.

Potential sounds:

- Button click
- Product selection
- Cart addition
- Cinematic transition
- Checkout success

If implemented:

SOUND ON
SOUND OFF

=====

60. 404 PAGE

=====

Create a cinematic 404 page.

Example:

Original anime-inspired training environment.

YOU TRAINED TOO HARD.

THIS PAGE DOESN'T EXIST.

[RETURN TO BASE]

=====

61. ERROR STATES

=====

Never show raw technical errors.

Example:

SOMETHING INTERRUPTED THE TRANSMISSION.

[TRY AGAIN]

Errors should remain understandable.

=====

62. ACCESSIBILITY

=====

Use:

- Semantic HTML
- Keyboard navigation
- Focus states
- Alt text
- Accessible buttons
- Screen-reader labels
- Good contrast
- Reduced motion support

Do not rely on animation alone to communicate information.

=====

63. SECURITY

=====

Implement:

- Secure authentication
- Admin authorization
- Role-based permissions
- Environment variables
- Stripe webhook verification
- ShipStation webhook verification where supported
- Input validation
- Rate limiting where appropriate
- Secure database queries
- XSS protection

- SQL injection protection
- Idempotent webhooks

Never expose API secrets in client-side code.

```
=====
64. ENVIRONMENT VARIABLES
=====
```

Create .env.example

DATABASE_URL=

STRIPE_SECRET_KEY=
STRIPE_WEBHOOK_SECRET=
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY=

SHIPSTATION_API_KEY=
SHIPSTATION_API_SECRET=

RESEND_API_KEY=

NEXT_PUBLIC_SITE_URL=

NEXT_PUBLIC_GOOGLE_ANALYTICS_ID=

Never hardcode secrets.

```
=====
65. FAILURE RESILIENCE
=====
```

If Stripe succeeds but ShipStation is temporarily unavailable:

PAYMENT = SUCCESS
ORDER = CREATED
FULFILLMENT = PENDING

Never lose the order.

Retry failed API calls.

Show the problem to the admin.

If Resend fails:

The order must still exist.

External services must NEVER corrupt the database.

=====
66. WEBHOOKS
=====

Create secure webhook endpoints for:

STRIPE

- Payment succeeded
- Payment failed
- Refund
- Other relevant payment events

SHIPSTATION

- Shipment creation
- Tracking
- Delivery
- Exceptions
- Relevant fulfillment events

All webhook processing must be idempotent.

=====
67. AUTOMATED BUSINESS FLOW
=====

The complete business should work like:

CUSTOMER

↓

WEBSITE

↓

PRODUCT

↓

CART

↓

CHECKOUT

↓
STRIPE
↓
PAYMENT SUCCESS
↓
DATABASE ORDER CREATED
↓
INVENTORY DECREASED
↓

↓
RESEND IN-TRANSIT EMAIL
↓
OUT FOR DELIVERY
↓
RESEND OUT-FOR-DELIVERY EMAIL
↓
DELIVERED
↓
RESEND DELIVERED EMAIL
↓
CUSTOMER TRACKING PAGE UPDATED
↓
ADMIN DASHBOARD UPDATED

The owner should NOT manually:

- Re-enter orders
- Copy customer addresses
- Copy tracking numbers
- Email tracking numbers
- Update inventory
- Update shipment statuses
- Create customer accounts
- Manually send standard order emails

The physical business task should primarily be:

PACK PRODUCT

↓

HAND TO CARRIER

=====

68. MARKETING AUTOMATION

=====

Eventually support automated marketing workflows such as:

NEW CUSTOMER

↓

WELCOME EMAIL

PURCHASE

↓

ORDER EMAILS

↓

POST-PURCHASE EMAIL

PRODUCT RESTOCK

↓

NOTIFY INTERESTED CUSTOMERS

CUSTOMER HAS NOT PURCHASED FOR 90 DAYS

↓

RE-ENGAGEMENT CAMPAIGN

NEW COLLECTION

↓

ANNOUNCEMENT

SALE

PROMOTIONAL CAMPAIGN

All marketing communication must respect applicable consent/unsubscribe requirements.

=====

69. EMAIL DESIGN

=====

Emails should NOT look like plain generic emails.

Create branded HTML emails.

Use:

- Logo
- Product imagery
- Brand typography
- Strong CTA
- Order information
- Tracking button
- Mobile responsive design

Every email must look excellent on mobile.

=====

70. CUSTOMER TRACKING EXPERIENCE

=====

The tracking page should be cinematic but useful.

Show:

ORDER #10452

PRODUCTS

CURRENT STATUS:
IN TRANSIT

Timeline:

✓ ORDER PLACED

- ✓ PAYMENT CONFIRMED
- ✓ PACKAGED
- ✓ SHIPPED
- IN TRANSIT
- OUT FOR DELIVERY
- DELIVERED

=====

73. ADMIN EMAIL TEMPLATES

=====

Create editable templates for:

- Order confirmation
- Packaged
- Shipped
- In transit
- Out for delivery
- Delivered
- Exception
- Refund
- Cancellation
- Marketing campaign

- Newsletter
- Product launch
- Restock
- Discount

Owner should be able to edit email content without coding.

=====

74. ADMIN WEBSITE PREVIEW

=====

When changing:

- Product
- Price
- Hero
- Collection
- Banner
- Product image

provide a preview before publishing.

Use:

=====

75. PRODUCT PUBLISHING

=====

New products imported from the PDF should start as:

DRAFT

Admin reviews:

- Name
- Description
- Images
- Design
- Price
- SKU

- Variants
- Inventory
- Shipping

Then:

PUBLISH

Only published products appear in the storefront.

=====

76. PRODUCT SKU SYSTEM

=====

Every product/variant should have a unique SKU.

Example:

STRAP-BLK-001

Ensure SKU uniqueness.

Use SKU across:

- Database
- Stripe metadata where appropriate
- ShipStation
- Inventory
- Orders
- Admin

=====

77. ORDER NUMBER SYSTEM

=====

Create human-readable order numbers.

Example:

#10452

Order number must be unique.

=====

78. AUDITABILITY

=====

Important business changes should be logged.

Examples:

Price changed
Inventory changed
Product published
Product archived
Order refunded
Order cancelled
Admin login
Admin role changed
Email campaign sent

=====

79. FINAL DESIGN STANDARD

=====

The customer storefront must feel like:

ANIME
+
MOVIE
+
FITNESS
+
STREETWEAR
+
CINEMATIC INTERACTION
+
LUXURY E-COMMERCE

The admin portal must feel like:

SHOPIFY
+
STRIPE
+
SHIPSTATION
+
EMAIL MARKETING

+
INVENTORY SYSTEM
+
BUSINESS ANALYTICS

BUT ALL INSIDE ONE SIMPLE PLATFORM.

The owner should not feel like they are using five different systems.

=====
80. MOST IMPORTANT PRINCIPLE
=====

DO NOT sacrifice business reliability for visual effects.

Priority order:

1. Payment reliability
2. Order reliability
3. Inventory accuracy
4. Shipping reliability
5. Admin usability
6. Mobile usability
7. Customer conversion
8. Email reliability
9. Performance
10. Cinematic animation
11. Decorative effects

The site should be beautiful, but it must first be a REAL BUSINESS SYSTEM.

=====
81. COMPLETE END-TO-END TEST
=====

Before considering the project complete, test the entire business lifecycle.

CUSTOMER SIDE:

1. Visit website
2. Intro animation
3. Skip intro
4. Browse products
5. Open product

6. Change variant
7. Change quantity
8. Add to cart
9. Cart animation
10. Checkout
11. Enter shipping information
12. Pay with Stripe test mode
13. Payment success animation
14. Order created
15. Order confirmation email
16. Admin sees order

FULFILLMENT:

17. Admin opens order
18. Admin marks order processing
19. Packaged email automatically sends
20. ShipStation receives order
21. Shipping label generated
22. Tracking saved
23. Shipping email automatically sends
24. Admin sees tracking

TRACKING:

25. Carrier tracking update
26. ShipStation webhook received
27. Database updated
28. Customer tracking page updates
29. In-transit email sends
30. Out-for-delivery email sends
31. Delivered webhook
32. Database updates
33. Delivered email sends

INVENTORY:

34. Inventory automatically decreased
35. Inventory history recorded
36. Low-stock alert works
37. Refund/cancellation inventory rules work

ADMIN:

- 38. Admin can add product
- 39. Admin can edit product
- 40. Admin can archive product
- 41. Admin can add inventory
- 42. Admin can view inventory history
- 43. Admin can fulfill orders
- 44. Admin can print labels
- 45. Admin can view customers
- 46. Admin can create discount
- 47. Admin can edit website
- 48. Admin can create email campaign
- 49. Admin can view email analytics
- 50. Admin can manage everything from mobile

PDF:

- 51. Upload product design PDF
- 52. Analyze designs
- 53. Create draft products
- 54. Admin reviews products
- 55. Admin edits products
- 56. Admin publishes products

MARKETING:

- 57. Customer opts into marketing
- 58. Admin sees subscriber
- 59. Admin creates campaign
- 60. Admin previews campaign
- 61. Admin sends test
- 62. Admin schedules campaign
- 63. Campaign sends
- 64. Analytics are recorded
- 65. Unsubscribe works

Test every failure case as well.

=====

82. FINAL REQUIREMENT

=====

Do not give me a static mockup.

Do not fake integrations.

Do not create buttons that don't work.

Do not use placeholder functionality where actual functionality is reasonably possible.

Build the actual full-stack architecture.

If an API key or external credential is required, create the integration correctly and use environment variables.

If an external service cannot be connected until credentials are supplied, build the complete integration layer and provide a clear setup screen/instructions rather than pretending it works.

The final product should be a real scalable e-commerce platform.

THE CUSTOMER GETS:

A WORLD-CLASS CINEMATIC ANIME/MOVIE SHOPPING EXPERIENCE.

THE OWNER GETS:

A SIMPLE ALL-IN-ONE BUSINESS OPERATING SYSTEM.

The final feeling should be:

CUSTOMER:

"I've never seen a lifting brand website like this."

OWNER:

"I don't need a developer to run my business."
